

Support remote work with reliable connectivity and comprehensive collaboration.

Verizon wireless business internet and Webex by Cisco bring teams together.

No matter where your workers are, they need to be able to communicate with each other and your customers, simply and easily.

Keeping teams connected has become more difficult as some employees no longer work in offices full-time, or at all. Being physically separated creates a risk of missed or delayed communications that are less likely when everyone is in the same location.

In addition, your team is likely composed of multiple generations, from Baby Boomers to Gen Z, each with their preferred method of communication; some prefer telephone conversations while others rely more on messaging. To work effectively, they need to be able to share and receive ideas and information through their medium of choice with the option to switch to another when required.

Verizon and Webex: a powerful combination for remote workers.

By combining wireless business internet with Webex Suite—a single, unified platform for communication and collaboration—and Webex Contact Center, your remote employees and call center agents can:

- Connect to contacts both inside and outside of their organization to get the information they need when they need it
- Collaborate securely and reliably to problem solve and innovate across teams and locations
- Better serve customers through their preferred channel with seamless transition to a live agent when needed

Make collaboration easier and more effective with Verizon wireless business internet and a secure unified communications platform from Webex.

Why wireless business internet from Verizon?

Reliable – Connect remote workers and call center agents on our award-winning wireless network.

Available – LTE Business Internet* is available virtually anywhere your workers are located and 5G Business Internet** is available in select locations.

Simple – Quick and easy to deploy and no messy wires.

Scalable – Month to month plans that can scale as needs change.

Why Webex?

- **Single provider** – One vendor to provide a full suite of services to simplify management and billing
- **Unified app** – A single desktop or mobile application for calls, chat, meetings and sharing documents
- **Admin tool** – Lets administrators efficiently configure services, control entitlements and manage calling, collaboration and contact center services for multiple locations, devices and users
- **The cloud, at your pace** – Leverage your existing Cisco investments and migrate to the cloud when you're ready, helping improve your return on investment
