

Turn intelligence into action for strong cyber resilience.

Fact sheet

Verizon Security Services

Cyber attacks continue to grow more frequent and sophisticated. Can you keep up? Our end-to-end cyber threat detection and response solutions deliver broad visibility, actionable intelligence and adaptive response against potential threats. We can help you spot vulnerabilities and take action against threats quickly and effectively—giving you stronger cyber resilience and better peace of mind.

DDoS Shield

Attack mitigation

Deploy highly scalable, carrier agnostic distributed denial of service (DDoS) protection.

DNS Safeguard

Proactive threat blocking

Build a first line of defense against threats on the internet, wherever users go.

Network Threat Monitoring/Network Threat Advanced Analytics

Early visibility of potential threats

Detect NetFlow anomalies and catch advanced threats before they disrupt your network.

Managed Security Services

Threat detection and response

Reduce risk and respond to threats quickly with advanced security analytics, monitoring and management.

Advanced Security Operation Services

Customized, integrated and dedicated risk analytics

Leverage an integrated service and operational model for Security Information and Event Management solutions that meet complex requirements.

Virtual Network Services - Security

Match your specific service requirements with an agile and scalable protection model that helps your network adapt quickly, simply and flexibly.

- More than 20 years of security experience
- Publisher of the annual *Data Breach Investigators Report*, an unparalleled source of security insight
- Nine Security Operations Centers (SOCs) across the globe
- Insight into a considerable amount of the world's IP traffic
- Positioned as a leader in the 2017 Gartner Magic Quadrant for Managed Security Services Worldwide¹

1. Gartner, Magic Quadrant for Managed Security Services, Worldwide, Toby Bussa, Kelly M. Kavanagh and Sid Deshpande, January 2017

Delivering real solutions for better business outcomes.

Verizon Professional Services

With our global capabilities and extensive expertise, we deliver a broad portfolio of security, cyber defense and incident response services to help give you better peace of mind throughout your security life cycle.

Threat intel and response

Change your security posture from reaction to prevention with world-class threat intelligence and rapid response capabilities. We can help you proactively identify, contain and remediate threats to your organization and your customers.

Threat Intel and Response Service | E-Discovery | Critical infrastructure service | Verizon Threat Research Advisory Center

Threat and vulnerability management

Detect complex vulnerabilities in your applications and business infrastructure that scanning tools alone can't discover. We offer flexible and customizable solutions, including automated baseline scanning tools, secure application development and holistic application security services.

Penetration testing | Secure development | Network security | Threat programs | Computer Emergency Response Team services

Governance, risk and compliance

Keep your security programs operating in a way that meets your needs while addressing security compliance requirements within government regulations and industry standards.

Cyber Risk Programs | Baseline security assessment | HIPAA assessment | Information assurance management action plans | SANS Top 20

Payment card industry (PCI)

Take a holistic approach to cardholder data security, risk and compliance with our comprehensive suite of PCI-related solutions and PCI Qualified Security Assessors (QSAs).

PCI audits | PCI consulting | Program management | Payment security | PCI Data Security Standard (PCI

Data Protection

Classify, monitor and protect data when at rest, in motion or in use – both inside and outside your enterprise.

Data discovery and classification | Data leak prevention (DLP) | DLP policy

Identity and access management (IAM)

Authenticate and manage users across your organization's physical, mobile and cloud computing environments, and provide secure access to enterprise resources from virtually any location or device.

IAM governance | Public key infrastructure assessments and integration | IAM maturity and roadmap

- Five forensics labs on our continents
- More than a decade of forensics investigations
- One of the largest teams of PCI Qualified Security Assessors in the world, serving more than 30 countries
- Managing data protection implementations for companies from 400 to 450K users
- Sixty-one billion security events monitored, on average, each year
